Deployment and version control: Docker, Git, Jenkins

Project management tools and methodologies: Jira, Agile/Scrum, Waterfall, Kanban

Languages: Romanian (Native), English (Native) , Italian (Intermediate) , French (Beginner)

About

Hello! I'm Carina and I'm a frontend developer and certified jack of all trades (master of at least a few).

On the technical side, my skills are in the realm of modern Frontend technologies and JavaScript frameworks. I specialize in the Vue ecosystem (including Pinia and Nuxt.js), with a strong focus on web performance, component architecture, and responsive UI design, while also dabbling in React and Angular from time to time.

Beyond writing code, I bridge the gap between technical teams and clients, whether that's joining directly in client-dedicated teams, running support, or navigating Agile, Kanban, or Waterfall workflows.

My focus is always the same: shipping clean, high-performing code on time, while keeping client satisfaction and team camaraderie at the center of the process.

Experience

Intermediate frontend developer — Nexuspoint LTD, UK

April 2022 - Present

- Improved site performance by 20% by building custom Vue 2/Nuxt 2 image components and migrating assets to modern formats like WebP and AVIF.
- Led a full website rebranding project for automotive clients while maintaining 100% platform uptime and zero disruption to day-to-day functionality on CarSupermarket.com
- Integrated third-party payment APIs and the Autoconvert Credit Application API to automate application processes and streamline checkout workflows.
- Built and maintained core SaaS products alongside custom web applications tailored to specific client needs.
- Worked closely with UI/UX designers to translate design mocks into clean, responsive user interfaces focused on smooth user journeys.
- Applied technical SEO best practices and handled cross-browser testing to ensure solid performance across all devices and screen sizes.

- Collaborated with backend developers to map out API contracts and ensure new features launched on schedule.
- Served as the main technical contact for clients, leading onboarding and training sessions while turning client feedback into practical product updates.

Frontend developer – EmotionStudios, Cluj-Napoca, Romania

November 2019 - April 2022

- Built and maintained responsive web applications and custom WordPress themes, translating UI/UX wireframes into clean, accessible HTML, CSS, and JavaScript.
- Optimized web performance and page load times across WordPress sites and web apps, ensuring smooth scalability and cross-browser compatibility.
- Partnered with designers, backend developers, and project managers to deliver high-quality digital products on schedule.
- Actively managed client onboarding and technical updates, breaking down complex engineering concepts into plain language for non-technical stakeholders.
- Handled end-to-end client communications to gather initial project requirements, set expectations, and address support inquiries promptly.

Front-end Developer Trainee in OSF Academy – OSF Global Services, Cluj-Napoca, Romania

October 2019 - November 2019

- Built a fully functional e-commerce web platform independently as the capstone project for an intensive training academy mentored by OSF Global.
- Implemented responsive layouts and interactive user features using core web technologies: HTML, CSS, and vanilla JavaScript.
- Followed industry-standard web development practices under direct technical supervision and code reviews.
